

Cornerstone Cloud

Cloud-based Managed File Transfer

You need a Managed File Transfer solution to improve productivity, address security concerns and automate data exchanges – but you don't want a large upfront investment. Cornerstone Cloud offers cloud-based Managed File Transfer, and is available in the AWS Marketplace as an Amazon AMI that enables you to rapidly stand up a server in Amazon.

Self-Managed Cloud (SaaS)

Security and Compliance

Security and compliance are primary concerns for your business, but you don't have the time or the budget that a secure, compliant solution often requires to implement.

Cornerstone Cloud offers unmatched commitment to the highest security standards, strict compliance, and proactive data protection. Multi-layer security features keep your data safe at every point in your workflows and compliant with regulatory measures for nearly any industry.

Not all encryption in the cloud is equal, and some is even done in multiple steps, leaving your confidential data exposed for thousands of processor cycles. Cornerstone's Streaming PGP encryption assures that your data is never compromised *even for a millisecond*. Cornerstone also supports the latest NSA-approved security standards, so you don't have to wait for your vendor to catch up with the current regulations.

Automation

If you're tired of babysitting unwieldy scripts and outdated batch files, a Cloud implementation of Cornerstone is the solution. Events management and automation distribute work volume and facilitate workflow to save you time on tedious but vital tasks. Security is enhanced with Cornerstone's automation capabilities, stopping password guessing and shutting down DoS attacks, with automatic notifications to the administrator.

Highlights

- Supports industry-standard protocols such as SFTP, FTP/S, WebDAV, WebDAV/S, HTTP
- Fully scalable and clusterable
- Runs on Windows, Windows 2008 R2, Windows Server 2008 R2
- FIPS 140-2, HIPAA, and PCI-compliant

File Sharing

Cornerstone's strong security doesn't inhibit your users' ability to be productive. Cumbersome additional steps can drive users to work around security measures by using commercial cloud services for file sharing. Enabling users to work efficiently and in a familiar environment keeps processes under your control and management.

Easily receive files from your partners, vendors, and customers — without requiring them to install software or have logins to Cornerstone Cloud. External users can simply drop files and folders into a browser interface.

Sending files outside of your organization is also an effortless process. Create a secure link to send to any external user. The user can click on the link to view or download, and you can set access rights easily before sending a file.

Simple Setup and Use

Cornerstone Cloud comes packaged for your technical team to deploy quickly and easily. Unlike on-prem solutions, you don't have to procure, maintain, and manage expensive hardware, or worry about eventual server repair and replacement costs. **Setup takes minutes**, and issues that can get in the way of software deployment are eradicated.

Low Upfront Cost and Flexibility

Cornerstone Cloud is the most flexible solution available. Avoid the large up-front investment in enterprise software. Eliminate hardware expenses and the associated facility costs. Easily spin up or turn off additional servers to accommodate peak processing requirements while controlling expenses. Available as an Amazon AMI, monthly costs are based upon usage, and pricing is as low as \$0.39/hr. Learn more at www.SouthRiverTech.com/Amazon.

"Cloud services have a high degree of cost variability, so expenses can quickly go down if demand for services is reduced."

-Gartner.com

"93 percent of IT security professionals state they [are] using some type of cloud service in their organization. Executives across all industries, sizes and geographic locations are recognizing the many advantages of cloud computing for businesses."

-BizJournals.com

South River Technologies is an innovator in secure file management software. More than 90,000 customers in 140 countries use SRT's software to make remote file access and collaboration more efficient for their customers, partners, and workforce.
