

## Devices Supported:

- iPhone
- iPad
- Android Phones
- Android Tablets

# WebDrive Mobile

Your files are scattered—they're on the corporate Sharepoint server, DropBox, legacy FTP servers. And they all have different apps, logins, and interfaces.

When you're on the go with your phone or tablet, the most important factor is convenience. You need your files to prepare for meetings and presentations, to collaborate with coworkers, to send files to clients while you're away from your computer and the ideas are fresh in your mind.

If you have multiple apps for your data, retrieving files scattered over multiple repositories not only distracts you from important events, it presents a serious time-sink. Small inconveniences accumulate to take large bites out of your time.

They're your files. You should have them when and where you need them.

## Meet WebDrive - Relief for the Busy Professional

WebDrive enables you to access all of your content, no matter where it's saved, from the convenience of your mobile device.

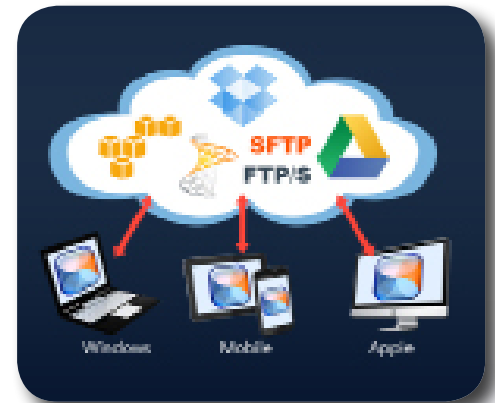

WebDrive is available on both the App Store and Google Play. Through one consistent, simple, secure interface, you can have all of your files at your fingertips.

Opening WebDrive gives you instant, secure access to any of those files. Get your information and get going.

## Security on the Go

Consistent with WebDrive products for Mac and PC, WebDrive Mobile opens encrypted tunnels between your device and the remote server. Used with secure servers, data transferred over the Internet is safe.

Plus, for file types supported on your device, WebDrive can either provide direct editing for content, or can work in conjunction with other apps on your device to allow you full control of your corporate data while on the go.

### Connects to:

- DropBox
- Google Drive
- Amazon S3
- SharePoint
- SFTP
- WebDAV and WebDAV/S
- FTP and FTP/S

### Features:
