Increasing the Storage Limit in WebDrive

Instructions for raising the disk quota, or
allowed storage, in WebDrive.

QuickStart Guide

Increasing the Storage Limit in WebDrive

WebDrive has a built-in disk quota (storage allotment) of 4 terabytes. A disk quota value is required by many systems, including Cornerstone. Why?

When WebDrive connects, it first looks for a quota (if supported) provided by the server. For example, say your Cornerstone is limited to 500 GB of storage. Assuming the server supports quotas and provides the quota value (which Cornerstone does), WebDrive will show that the limit is 500 GB.

However, some enterprise servers don't support quotas or don't provide quotas normally, or they may have server software WebDrive cannot interface with in order to read the specified quota. In this case, WebDrive will provide a default value of 4TB, which is sufficient for most organizations. For organizations where a higher limit is necessary, this value is easy to change.

To increase the storage limit in WebDrive:

1. Open the registry editor and go to HKEY_CURRENT_USER\Software\South River Technologies\WebDrive\Connections\Your Site Profile Name)
2. Find QuotaMB and change the value to something greater, depending on how large you would like the limit to be.

About South River Technologies

South River Technologies (SRT) is an innovator in secure file management software. SRT software allows users to securely access, manage, and collaborate on files over the Internet, streamlining business processes to improve productivity. SRT's products enhance customers' existing applications by instantly enabling secure access and collaboration within those applications. More than 90,000 customers in 140 countries use SRT's software to make remote file access and collaboration more efficient for their customers, partners, and distributed workforce.
